mkatub

ARABI MADE SIMPLE.

THE COMPLETE

BRAND + WEBSITE BUILD BLUEPRINT

A visual moodboard, three-page UX specification, conversion architecture, data model and step-by-step Claude Code handoff.

Selected direction / Concept 04

DESIGN TARGET 99/100 | NOT A VALIDATED SCORE

What we are building

A conversion-first Arabic learning website for foreigners, centred on live conversation with native tutors.

POSITIONING

Speak real Arabic.

Choose Egyptian Arabic or another supported learning path. Meet authentic teachers, try a lesson and progress with confidence.

AUDIENCE

Global beginners first

Travellers, expats, partners/families, heritage learners and professionals needing practical spoken Arabic.

DIFFERENCE

Dialect + real humans

Not another app-only drill system: expressive dialect discovery, authentic speech, clear teacher matching and low-friction booking.

LOCKED BRAND DECISIONS

- Name: mkatub in Franco-Arabic letters; Arabic secondary form: .
- Logo: concept #4; bold abstract M + lime accent; wordmark “mkatub”.
- Primary colour: neon lime #B6FF00; paired with near-black forest green.
- First three primary pages: Home / Courses & Dialects / Tutors & Trial Booking.
- All visuals in this document are design references; no mock review, tutor, price or stat is verified.

The MKATUB moodboard

Direction: expressive Franco-Arabic language, credible tutors, striking lime and dark green, warm real-life culture.

Logo concept 04

Use the monogram-led direction, not a literal WhatsApp icon or a generic education badge.

REFERENCE: SELECTED CONCEPT #4

Build a precise vector redraw. Retain the thick dark M and offset lime dot. Refine balance, optical weight and small-size legibility.

mkatub

ARABI MADE SIMPLE.

REQUIRED LOCKUPS

- Horizontal: monogram + lowercase mkatub + optional tagline.
- Compact: M monogram only, optimised for favicon/app.
- Inverted: ivory or lime mark on dark green.
- Secondary Arabic: “”, only where the audience benefits.
- Deliver SVG plus PNG assets; keep clear space of 0.5x mark width.

Colour and typography

Lime provides energy; deep green provides trust. Warm off-white keeps the interface clean and calm.

Neon lime
#B6FF00
primary CTA

Deep green
#0B2D1F
dark sections

Ink
#061B17
main text

Ivory
#FFF9EC
surface

Sand
#EADFCB
neutral

Sage

rare accent

TYPOGRAPHY PAIRING

Plus Jakarta Sans

Headlines / geometric, modern, confident

Inter

Body, forms, labels and UI controls

ARABIC + FRANCO-ARABIC

Noto Sans Arabic / Cairo

Actual Arabic text must use an Arabic-capable font and RTL direction. Franco-Arabic is an editorial accent, not a replacement for accessibility or native-script learning content.

NO NEON TEXT ON WHITE

UI tokens and interaction states

One coherent component library across marketing pages, mobile, trial booking and the future learner area.

GRID

12-col desktop / 8 tablet / 4 mobile

Max content width 1280px; gutters 24-32px

SPACING

8px baseline

4, 8, 12, 16, 24, 32, 48, 64, 96

RADII

12 / 18 / 24px

Pills max 999px; never arbitrary curves

SHADOWS

Soft, directional

Light surfaces only; dark backgrounds use borders

TYPE SCALE

H1 56-72; H2 40; H3 28

Body 16-18; labels 14; line-height 1.4-1.55

STATES

Default / hover / active / disabled

Loading, error, empty and success required

ACCESSIBLE CTA: dark text on lime | clear focus ring | visible price and timezone | no dead buttons

Competitor-informed differentiation

Benchmark useful behaviours - do not copy layouts, brands, visual assets or unsupported claims.

Preply	**Tutor-first trial booking**	Visible availability, lesson goals, timezone
Mango Languages	**Dialogue + culture**	Practical situational content and native audio
Playaling	**Real-world dialect media**	Authentic Egyptian, Levantine, Gulf samples
Kaleela	**Structured beginner lessons**	Explicit levels and learning progression
Typical marketplaces	**Choice and tutor variety**	Differentiate with editorial curation and clarity

MKATUB EDGE: transparent dialect selection + genuine teacher profiles + short path to first spoken conversation

Audience, jobs to be done

The site must answer “Which Arabic should I learn?” before overwhelming visitors with tutors or lessons.

01 **COMPLETE BEGINNER**

“I cannot read Arabic yet; I want to speak.”

Guide: beginner-friendly dialect quiz, sample words, gentle entry.

02 **VISITOR / EXPAT**

“I need Egyptian Arabic for everyday life.”

Guide: situations like cafés, taxis, neighbours and family.

03 **HERITAGE / FAMILY**

“I understand some Arabic but cannot respond.”

Guide: speaking-first placement, flexible tutoring.

04 **WORK / STUDY**

“I need a specific dialect or Modern Standard Arabic.”

Guide: purpose-led course route, tutors and measurable outcomes.

First 3 pages: route map

Prioritise three public pages that generate trial bookings; add supporting routes only when they have real content.

/	**HOME**	Understand offer -> choose dialect -> book trial
/courses	**COURSES & DIALECTS**	Compare courses, level, outcomes and available tutors
/tutors	**TUTORS & TRIAL**	Filter real teachers -> see availability -> reserve
/book-trial	**CONVERSION FLOW**	Shareable stepper/modal with real timezone and confirmation

MVP navigation: Courses | Dialects [anchor to courses] | Tutors | How it works [anchor] | Book a trial

Homepage: visual reference

Use the following as an art-direction reference, not final copy or verified social proof.

THE THREE-SECOND TEST

- What is offered? Live Arabic lessons with native tutors.
- Who is it for? International students and absolute beginners.
- What can I do now? Book a trial or explore dialects.
- Why trust it? Genuine tutor profiles and real schedule visibility.
- What happens next? Clear price, duration and lesson expectations.

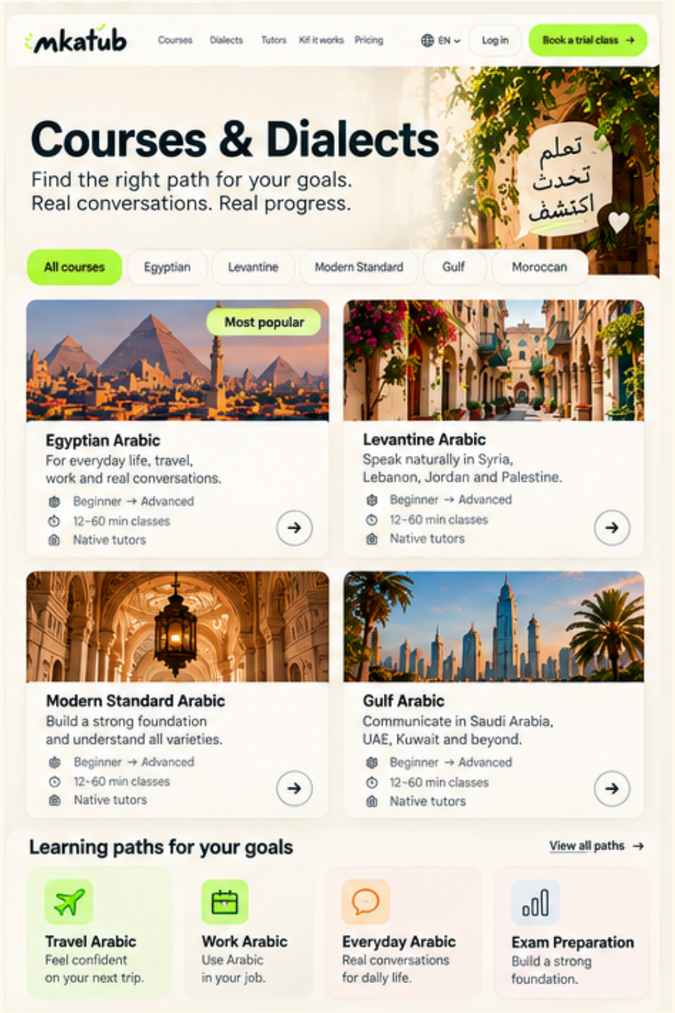

Homepage: scroll architecture

Conversion first, information second. Keep the key action visible without making the page feel like a sales funnel.

01	**STICKY NAV**	Logo | Courses | Tutors | How it works | CTA; minimal menu on mobile.
02	**HERO + PREVIEW**	H1: Speak real Arabic. Connect for real. Actual tutor photo; play sample audio; Book a trial.
03	**DIALECT SELECTOR**	Egyptian first + MSA, Levantine, Gulf, Moroccan only if genuinely offered.
04	**HOW IT WORKS**	Choose dialect -> meet teacher -> practise and progress. No inflated time claims.
05	**TUTORS + DEMO**	Real profiles, languages, real available times; 15-30 second subtitled preview.
06	**CONFIDENCE + FAQ**	Policies, learning outcomes, learner FAQ; social proof only if authentic.

Courses & dialects: visual reference

Five visually distinct routes; users can choose based on need, not geography alone.

THE DECISION INTERFACE

- Simple filter pills: All / Egyptian / Levantine / MSA / Gulf / Moroccan.
- Card: correct dialect name, who it suits, level, lesson format and sample audio.
- Comparison helper: everyday speech vs formal MSA, with respectful caveats.
- Course detail: clear curriculum preview and linked tutors.
- Only publish categories supported by actual course inventory.

Course discovery, states and taxonomy

Do not imply Egyptian, Levantine, Gulf and Moroccan are interchangeable or single standardised accents.

FILTER MODEL

- dialect (single/multiple), goal (travel, culture, family, career), level (A0-C1 if course-defined), format and tutor availability.
- Filter changes update the URL query string for back/forward, sharing and SEO-safe state.
- Course cards show title, dialect, learner outcome, validated pricing or “Ask about pricing”, CTA.
- “Listen to this dialect” opens a lightweight audio player with transcript and translation.
- No matches: supportive empty state and quick reset, not a blank grid.

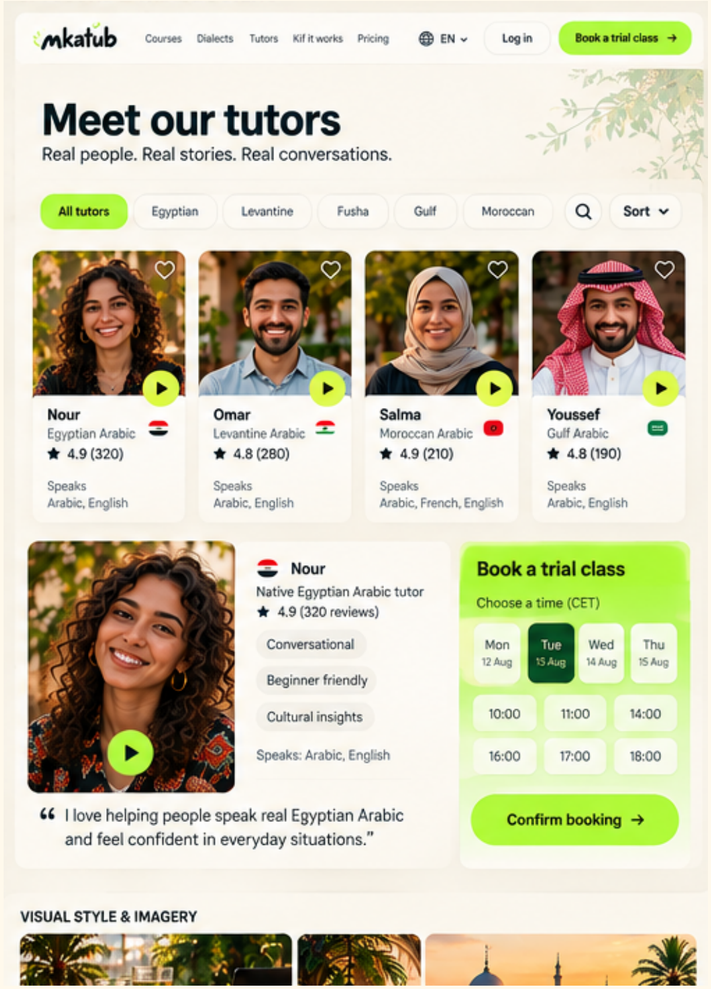

CONTENT SCHEMA FOR EACH DIALECT

- id / slug / public title / dialect family / region examples
- beginner suitability / learning outcomes / level taxonomy
- sample words: Arabic script, transliteration, English, audio URL
- course syllabus and approved native tutor association
- publication status: draft, review, published
- fallback when no native-speaker recording exists

FRANCO-ARABIC EXAMPLE: “Ehki Arabi B'sara7a” is a campaign accent, not formal transliteration policy.

Tutors & booking: visual reference

Turn human credibility into trust, and trust into an actual reservation.

BOOKING CONVERSION PRINCIPLES

- Teacher portraits should be genuine and permissioned.
- Show language, dialect, years/credentials only when verified.
- Display the trial duration and price before personal data entry.
- Slots must come from an actual calendar, never a generated list.
- Timezone always shown, with a visible change control.
- Booking success is confirmed by the provider/webhook, not by button click.

The trial booking journey

Target: minimal friction, no surprises, no dark patterns and no account required before initial slot selection.

01

CHOOSE

Dialect + objective

02

MATCH

Tutor + real availability

03

CONFIRM

Local timezone + trial length

04

DETAILS

Name + email + consent

05

PAY / RESERVE

Conditional on confirmed policy

06

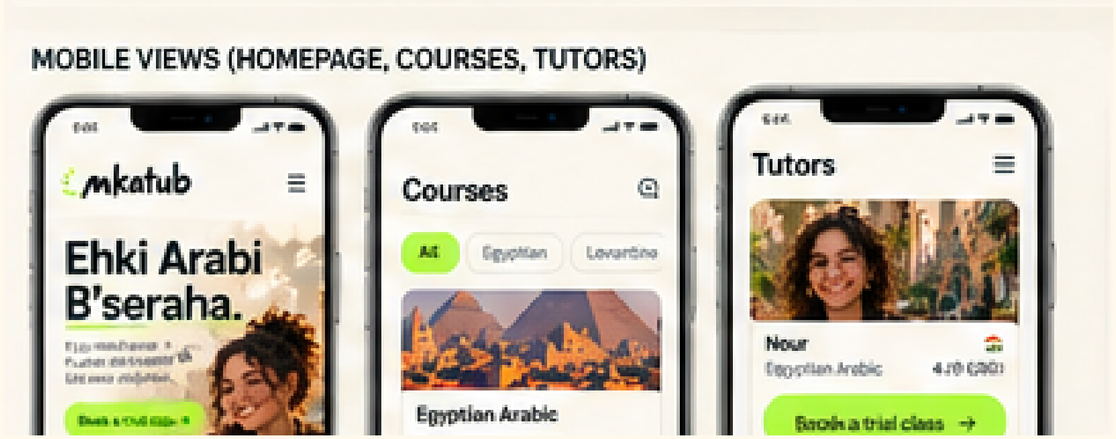

SUCCESS

Confirmed event + email

Business rules: protect against double booking; handle calendar errors; send reminders; show cancellation/reschedule policy; verify payment by webhook if applicable; never assume a free trial.

Mobile-first conversion

Mobile is not a squeezed desktop. Each card, form and booking interaction must be designed for touch.

CORE MOBILE BEHAVIOURS

- Sticky bottom CTA on pages 1-3; avoid overlapping chat/cookie banners.
- Filter pills scroll horizontally with visible keyboard focus.
- Booking is a one-column stepper with local timezone beside time slots.
- Tap targets at least 44px; fields 16px+ to avoid zoom traps.

RESPONSIVE BREAKPOINT CHECKLIST

- 360/390px: hero text first, teacher photo below, CTA visible.
- 768px: courses in 2 columns; tutors cards 2 columns.
- 1024px: booking panel may dock on right; tabs remain usable.
- 1440px: content max-width 1280px, room to breathe.
- Arabic RTL: mirrored layout intentional, not just text alignment.
- Always test keyboard navigation, slow connections and 200% zoom.

Voice, language and exact homepage text

Speak like a confident, friendly tutor. Avoid generic tourist branding or claims of instant fluency.

ENGLISH COPY / APPROVED DRAFT

Speak real Arabic.
Connect for real.

Learn Egyptian Arabic, Modern Standard Arabic and other supported dialects in live classes with native-speaking tutors.

Book a trial class | Explore dialects

Example microcopy: “Hear how this sounds” / “Find your dialect” / “See available times” / “No matching slots? Try another tutor.”

FRANCO-ARABIC CAMPAIGN LAYER

Ehki Arabi.
B'sara7a.

- “Ahlan fi mkatub” - welcoming brand moment.
- “Nafs el logha. Kalam mokhtalef.” - optional dialect line.
- Language team must approve transliterations and dialect-specific phrases.
- For instruction, display Arabic script + audio + English meaning.
- Use lang=ar and dir=rtl for Arabic; never substitute Arabizi for instruction.

What Claude Code must build once

Every component supports hover, focus, loading, error and empty states where relevant.

MARKETING

Navbar, Hero, DialectTile, TutorPreview, HowItWorks, FAQ, Footer

DISCOVERY

DialectFilter, GoalFilter, CourseCard, CourseCompare, AudioPlayer

TRUST

TutorCard, VerifiedProfileFields, IntroVideo, ReviewDisplay (real only)

CONVERSION

TrialCTA, TimezonePicker, SlotPicker, BookingStepper, PaymentGate

SYSTEM

Dialog, Toast, Skeleton, EmptyState, ErrorBoundary, ConsentBanner

LEARNING LATER

LessonCard, VocabularyAudio, PracticeActivity, ProgressMeter

Implementation architecture

Recommended default: modern SSR-first, accessible, componentised and low-ops. Use alternatives only if the existing repo dictates.

FRONTEND	Next.js App Router / TypeScript / Tailwind / reusable UI components
DATA + AUTH	Supabase Postgres + Auth + Storage + mandatory row-level security
BOOKING	Cal.com hosted scheduling + embedded UI in MVP; provider is source of truth
PAYMENTS	Stripe Checkout only after prices, currencies, entity and policy are approved
CONTENT	Structured typed seed data first; editable CMS later if editors need it
MESSAGING	Transactional email via verified provider; consent-aware marketing

Minimum reliable data schema

Separate public content from private learner/contact records; never use client-side authorisation as security.

dialects	slug, display_name, locale, description, published, hero_media
courses	id, dialect_id, level, outcomes, price_ref, publication_state
tutors	id, public_name, portrait, bio, credentials, verification_status
tutor_dialects	tutor_id, dialect_id, proficiency, availability_priority
lesson_types	id, title, duration, payment_policy, provider_event_type_id
booking_records	id, tutor_id, learner_id/email, UTC start, status, provider_id
leads / consent	email, purpose, consent_timestamp, source, retention_policy
lesson_progress [P1]	learner_id, lesson_id, completion, updated_at

Auth, booking state and failure recovery

Every externally triggered event must be idempotent; every user-specific read must have a database-level access rule.

ROLES

Visitor / learner / tutor / admin. Tutors may only edit their own permitted profile fields. Admin rights verified on server.

DATA ACCESS

Public published catalog readable anonymously. Learner booking and contact data only visible to owner and authorised admin.

BOOKING STATE

draft -> slot_selected -> pending_payment or pending_confirmation -> confirmed -> completed/cancelled; reconcile failures.

WEBHOOKS

Verify signature, deduplicate event IDs, store raw provider ID, retry safely, protect webhook endpoint.

ERROR UX

No slots -> alternatives; provider down -> try later; payment cancelled -> never show success; duplicate request -> stable message.

MEDIA

Permissioned tutor photos and captions; uploads constrained by MIME/type/size; avoid exposing private bucket paths.

Measurement and CRO events

Measure behaviour before optimising to a score. Example KPI targets are hypotheses, not achieved outcomes.

VISITOR -> COURSE	dialect_filter_used; course_card_opened; sample_audio_played
COURSE -> TUTOR	view_tutors; tutor_filter_used; tutor_profile_viewed
TUTOR -> SLOT	trial_cta_clicked; calendar_opened; slot_selected
SLOT -> BOOKED	details_submitted; checkout_started; booking_confirmed
RETENTION	lesson_attended; next_lesson_booked; feedback_submitted [if real]

Set up event naming, attribution, cookie consent, conversion reporting and privacy-safe analytics. A/B test hero CTA, dialect quiz, tutor visibility and booking form length only after baseline traffic is adequate.

SEO, localisation and performance

MKATUB should be discoverable for the intent behind a dialect, not just for “learn Arabic”.

TECHNICAL SEO

Server-rendered HTML; canonical tags; descriptive meta titles; XML sitemap; robots; OpenGraph and social cards.

SITE STRUCTURE

Unique pages for real course inventory. Avoid empty thin pages for cities/dialects not taught.

CONTENT CLUSTERS

Egyptian conversation basics, which Arabic dialect to learn, MSA vs Egyptian, travel Arabic, authentic audio samples.

INTERNATIONALISATION

English-first launch; Arabic with true RTL and language tags; hreflang only for real localised pages.

PERFORMANCE

Optimised real photography, responsive images, limited hydration, lazy nonessential sections, locally consistent fonts.

STRUCTURED DATA

Only accurate Organization, Course or FAQ structured data as applicable; never mark up invented review ratings.

Accessibility, legal and trust

A high design score means nothing if the site is inaccessible, misleading or unreliable.

ACCESSIBILITY TARGET: WCAG 2.2 AA

- Body-text contrast >= 4.5:1 and large text >= 3:1.
- 44px touch targets preferred; visible keyboard focus.
- Form errors associated with inputs; no colour-only status.
- Captions/transcripts for every tutor video or audio sample.
- Language + reading direction annotated correctly.
- Reduced motion and 200% zoom without loss of content.

LEGAL + COMMERCIAL GATES

- Confirm contracting entity, jurisdiction, taxes and payment account.
- Verify brand/trademark/domain before public launch.
- Publish privacy policy, terms, cancellation/refund rules and tutor consent.
- Display true price, currency, trial terms and timing before checkout.
- Consent and retention rules for lead emails and analytics.
- Use real photos, actual testimonials and genuine availability only.

Four execution phases

Sequence enables a high-fidelity demo without pretending backend integrations are live.

SPRINT 1

Foundation

Repo audit; tokens; logo assets; responsive header; shared components; content model; homepage visual polish.

SPRINT 2

Three core pages

Courses filters and URLs; native audio; tutor directory and detail; booking UI states; mobile QA.

SPRINT 3

Real integrations

Supabase/RLS; Cal.com live availability; transactional email; payments if approved; webhook reliability.

SPRINT 4

Release quality

SEO, accessibility, localisation, E2E flows, analytics, consent, performance, production deploy.

Acceptance and test matrix

Manual review plus automated tests, with evidence. Design quality is a goal, not an automatically provable 99/100.

CONTENT	No fake reviews, numbers, tutors, fees, badges or available slots published.
FUNCTIONAL	Every navigation CTA routes correctly; filters persist in URL; trial flow handles failures.
PAYMENTS	Provider webhook confirms success; no false confirmation; idempotent reconciliation.
SECURITY	RLS checks, roles, secret handling, server-side validation and dependency audit.
A11Y	Keyboard journey; contrast audit; labels; headings; audio captions; RTL checks.
SEO	SSR metadata, indexability, sitemaps, language tags and no thin public routes.
PERF	Aim LCP <=2.5s, CLS <=0.1, INP <=200ms on representative devices.
RESPONSIVE	360, 390, 768, 1024 and 1440px visual regression snapshots.

Items Claude must never invent

If unknown, show clearly labelled draft fixtures in development only and keep public pages honest.

01	**REAL TUTORS**	Profiles, qualifications, spoken dialects, profile images, introductory videos.
02	**PRODUCT INVENTORY**	Which of Egyptian / MSA / Levantine / Gulf / Moroccan are actually taught at launch?
03	**PRICING**	Free or paid trial, duration, lesson packages, currency, invoices, taxes.
04	**SCHEDULING**	Tutor hours, minimum notice, booking rules, cancellation, reschedule, holiday logic.
05	**PAYMENT ENTITY**	Registered company / legal merchant of record / Stripe jurisdiction and details.
06	**HOSTING + DOMAIN**	Approved domain, DNS access, email sender, brand/trademark clearance.
07	**MEDIA + LANGUAGE**	Approved photos, real recordings and native-reviewed dialect copy.
08	**POLICIES**	Privacy, terms, refunds and student/tutor agreements.

Claude Code - master prompt / 1

Paste the complete prompt provided as a companion .md file. The instructions below are also embedded here.

- You are the senior product engineer, design systems lead and QA owner for MKATUB, a Franco-Arabic branded online Arabic learning platform.
- Use the attached PDF/images as visual references. The final UI should be more accessible, clearer and more conversion-oriented than AI mockups; do not blindly reproduce hallucinated text.
- First inspect the existing repository, available scripts, environment variables, components and integrations. Report a concise implementation plan. Do NOT replace existing useful infrastructure without reason.
- Implement production-quality responsive Home (/), Courses & Dialects (/courses) and Tutors (/tutors), with a resilient trial booking flow (/book-trial).
- Brand is lowercase “mkatub”; secondary Arabic “”. Lock logo concept #4 (abstract dark M with neon lime dot). Primary #B6FF00; deep #0B2D1F; ivory #FFF9EC; copy tone modern, human, authentic.

Claude Code - master prompt / 2

The developer must verify real routes, interactions, test outputs and screenshots before claiming completion.

- Use Next.js App Router, TypeScript and Tailwind if building a new repo; preserve the current production stack if an appropriate codebase already exists.
- Build typed design tokens and shared accessible components. All visible actions must work. Use genuine backend availability and verified data; placeholders must be explicitly marked DEMO and excluded from production.
- For trial bookings: timezone-aware slots, validation, no duplicate confirmation, clear paid/free status, confirmation sent only after provider or payment success. Never store keys in frontend code.
- Provide EN first, proper Arabic-script/RTL support, reviewed Franco-Arabic accents, semantic SEO and accessible audio/transcript alternatives.
- Add automated unit/E2E checks, Lighthouse-style performance and accessibility review, image snapshots at mobile/tablet/desktop and transparent known limitations.
- Ship a concise README, schema/migrations, env.example, deployment instructions, route list, tests and an explicit list of unconfigured business data.

Primary resources and supplied assets

External platform features were checked against official documentation; asset mockups remain illustrative, not proof of product status.
